PROFILE

UX Designer with 13 years of experience driving user-centered design from insight to implementation. My background spans safety-critical medical device interfaces and government systems through to complex B2B products in telecom, finance and industry.

I work in agile environments using Design Thinking, Lean UX and impact mapping, and act as a bridge between business and development. In recent years I have expanded into AI-augmented prototyping, which lets me take ideas from brief to clickable product in days rather than weeks.

AREAS OF EXPERTISE

Methods and processes

User-centered design · UX strategy · Design Thinking · Lean UX · Service design · Impact mapping · Hypothesis-driven design · Customer journeys · AI-augmented prototyping

Tools and techniques

Figma · Miro · Adobe XD · Sketch · Lovable · Cursor · Claude · ChatGPT · Design systems · Wireframing · Prototyping

Activities

User interviews · Usability testing · Workshop facilitation · User research · Stakeholder management · Accessibility (WCAG)

PROJECTS AND ENGAGEMENTS

UX Designer · Husqvarna *Aug 2025 — present*

UX research, concept development and usability testing for new features in Husqvarna's dealer portal — Dealer Dashboard, search functionality and quotation flow. The work has included analysis of self-service opportunities and mapping the customer journey for dealers, where multiple user types with different levels of expertise need to find information quickly.

I drive AI-based prototyping in Lovable alongside Figma and Miro for rapid concept validation. AI prototypes have made it possible to go from idea to clickable prototype in days instead of weeks, giving us earlier and higher-quality feedback from dealers. The Dealer Dashboard work has progressed to implementation phase.

AI Prototyping · Lovable · Customer Journey · Self-Service · B2B Portal

UX Designer · ARKET *Aug 2024 — June 2025*

Reinforced ARKET's UX and service design capability as they launched a new web platform market by market. Worked both on developing new features and on testing and analysis during market rollouts.

UX Design · Concept Development · User Research · Figma

UX Designer · Volvo Pay *Sep 2023 — July 2024*

UX design of features and interfaces in Volvo Pay's payment service for merchants and businesses. Worked in Figma with wireframes, design systems and user testing. Conducted analyses on consolidating multiple payment solutions into a single interface.

Lead UX Designer · Design System · Service Design · Customer Journeys

UX Designer · Chalmers University of Technology *May 2022 — Aug 2023*

UX/UI designer in agile project for new website. Worked with design system in Figma, accessibility according to WCAG, and conducted usability testing with students in the project's final phase.

Wireframing · Design System · Accessibility · Usability Testing

Service Designer · Holmen Skog *Apr 2022 — June 2022*

Service design for a tool supporting planning and communication between forest owners and Holmen. Conducted interviews with forest owners and developed customer journeys and recommendations for a proof of concept.

Service Design · Customer Journeys · Interviews

UX Design Lead · Axiomatics *Oct 2021 — Apr 2022*

UX Lead Designer for technically demanding solutions in backend systems and dynamic authorization. Held both UX responsibility for ongoing projects and ownership of developing the company's processes and methods around UX design.

UX Lead · Design Thinking · Hypothesis-Driven Design · Workshops

Senior UX Designer · The Swedish Pensions Agency *Sep 2020 — Mar 2021*

Returned to the Swedish Pensions Agency as a consultant to design an internal fund trading reporting system — a complex administrative tool for experts and super users. To design effective workflows it was essential to understand the fund administrators' daily work in depth. Conducted interviews and workshops to map work processes and friction points, then designed flows, wireframes and prototypes that were tested with users.

In parallel I worked in an agile digital team on pensionsmyndigheten.se — one of Sweden's most-visited government websites and a critical channel for citizens managing their pension savings or withdrawals. Accessibility (WCAG) was a given in both tracks, and the requirements for accessibility within the public sector set the bar for what was acceptable in the design.

Wireframing · Prototyping · Accessibility (WCAG) · Design Thinking · Public Sector

UX Strategist / UX Lead Designer · Telia Division X *Oct 2019 — Feb 2020*

Analyzed Telia's UX organization and developed a new UX strategy. Conducted interviews and workshops with UX designers, stakeholders and managers. Delivered a strategy report and presentation with implementation recommendations.

UX Strategy · Impact Mapping · Workshops · Design Thinking

UX Designer · Stockholm City Library *Sep 2018 — Apr 2019*

UX/UI design for a new website together with the library's own UX designer and development team. Built on existing discovery work by analyzing the impact map and sketching design solutions in wireframes. Created prototypes and validated them through qualitative usability testing.

Wireframing · Prototyping · Usability Testing · Public Sector

UX Designer · Worldline *July 2017 — Aug 2018*

UX design, user research and interaction design for Worldline's payment platform — a complex financial transaction system handling payments between merchants and banks. The system had been built without dedicated UX involvement, which showed in inconsistent interaction patterns, outdated visual design and unclear workflows. The migration from Angular 3 to Angular 8 created an opportunity to also restructure the interface.

I conducted interviews with specialist users, architects and product owners to understand their daily work before simplifying the interface — without that understanding there is a real risk of simplifying in ways that actually make the work harder. For simpler areas I designed directly; for more complex parts I led design studios with developers, product owners and other stakeholders.

Outcome: a more consistent and usable interface, supported by a design system covering navigation, search patterns, button types and color specifications. The system could be reused across other parts of the platform and established a shared visual logic going forward.

UX Design · User Research · Interaction Design · Design System · Finance

UX Designer · H&M *Jan 2016 — June 2017*

UX design for an internal IT system for planning clothing collections. Conducted in-depth discovery with interviews, target group analysis, impact mapping and the Kano model. Visualized the benefits of the new design through customer journeys for the steering group.

Impact Mapping · Customer Journeys · Discovery · Agile Development

UX Designer & Business Developer · The Swedish Pensions Agency *Aug 2013 — Nov 2015*

Two consecutive roles at the Swedish Pensions Agency. As UX designer I designed flows, wireframes and prototypes for a new fund reporting system for fund companies. As business developer I worked on integrating UX, requirements, accessibility and service design into the agency's development methodology during a major reorganization.

Wireframing · Prototyping · Business Development · Accessibility

UX Designer · Maquet Critical Care (medtech) *Jan 2011 — Dec 2012*

UX design of safety-critical medical device interfaces — ventilators and anesthesia machines. In medtech, UX is not just a usability concern but a regulatory requirement: products cannot reach the market unless UX work follows documented processes. For each project we wrote a UX plan, scheduled usability testing with real users in hospitals, and ran acceptance tests before the project could close. Everything was documented for traceability.

This rigorous methodology has shaped how I think about design even in less regulated contexts — structure, hierarchy and responsibility are not just aesthetic choices but have real consequences for the user. I quickly took on significant responsibility and led the UX work in several projects. In one project a design patent was awarded on my work, and I conducted usability testing in both England and the United States with doctors and anesthesia nurses.

Safety-Critical Design · Usability Testing · Interaction Design · Design Patent · Medtech

PERSONAL AI BUILDS AND SIDE PROJECTS

Manor Lords · Multiplayer Strategy Game *2025*

Designed and built a real-time, server-authoritative multiplayer strategy game from scratch, based on my own board game concept. Stack: React, Node, Socket.io, PostgreSQL. Hosting: Vercel + Render. AI

collaboration via Claude and ChatGPT. Live multiplayer prototype with working session handling and persistent state.

React · Node · Socket.io · PostgreSQL · AI Collaboration

Theta Simplified · AI Assistant and Content Platform 2025

Domain-trained AI assistant for the Theta blockchain ecosystem with live on-chain data injection. Produces weekly videos via Remotion to four social media channels. The CEO of Theta Network has started engaging with the content.

AI Assistant · Live Data · Web3 · Remotion

Fagerhult Sustainability Calculator · Interactive Simulation 2025

Interactive B2B simulation showing customers how much CO₂ and energy they can save by switching luminaires. Real-time calculation.

Sales Tool · Real-time Calculation · B2B

TLV Intranet "Atlas" · Concept Intranet 2025

Concept intranet for the Swedish Dental and Pharmaceutical Benefits Agency — built as a tender response.

Public Sector · IA · Concept

EMPLOYMENT

Nexer · Senior UX Designer

Aug 2022 — present

Axiomatics · UX Lead Designer

Oct 2021 — Apr 2022

Nexer (formerly Sigma) · UX Designer

Dec 2015 — Sep 2021

The Swedish Pensions Agency · UX Designer / Business Developer

June 2013 — Nov 2015

Maquet Critical Care · UX Designer / Interaction Designer

Jan 2011 — Dec 2012

EDUCATION AND CERTIFICATIONS

M.Sc. in Engineering — Interaction Technology and Design

2005 — 2010

AI & Prompt Design for UX & UI Designers

Stockholm Technical Institute · 2026

Design Sprint

2020

Impact Mapping and Effect Management

InUse Academy · 2016
